<p>/David C. Payne/ Supervisory Patent Examiner, Art Unit 2611</p>		

Continuation of 11. does NOT place the application in condition for allowance because: As per Applicant arguments regarding claims 26 and 46, it is the Examiner position that applied reference teach the limitations claimed in the present application and Examiner maintains the rejection. Sampath clearly shows in Fig. 5, that the signal is being received by antenna 500 and being process in the subscriber unit (receiver) and then transmitted, so the processing is done in the subscriber unit (receiver). For further support please see paragraph 58. Applicant argues that the combination of the two references is not obvious to one of the ordinary skilled in the art. In response to above-mentioned arguments, applicant's arguments have been considered. However, the applied references can be combined and obvious to one of the ordinary skilled in the art. The applied prior art are both in analogues art and try to resolve the issue which is well known in art. The combination is reasonable and the to support the obviousness examiner relied upon the prior art, not the disclosure of the invention. At the time of the invention it would have been obvious to one ordinary skill in the art to modify Sampath teachings by providing incremental updates to the system, as taught by Moos. The reason for combination is to improve the communication system operates to transmit communication signals having information contents and other characteristics generated at, or provided to a transmitter upon the communication channel.
